Redundant array of inexpensive disks (RAID) technology has become a widely accepted and prolific technology for improving storage system performance. It can improve input/output (I/O) performance with lower hardware cost compared to a disk array. In general, a RAID system distributes data across multiple storage units to improve data throughput performance and reliability. While performance can be enhanced by building RAID systems with more disks, the cost can become prohibitively large. For example, a RAID system may include one or two sixtyfour gigabyte (GB) hard disk drives (HDDs). While these HDDs are
